

# Cleveron 302

> Cleveron 302 is an indoor automated parcel locker

> The modular column system allows multiple configuration and layout options

- > **Modular design** – adjustable to specific parcel volume and location requirements
- > **Customizable and adaptable** – the machine is brandable and the software can easily be integrated by public API
- > **Proven reliability** – the dependability of the locks and controllers has been proven in live use
- > **Enhanced customer experience** – customer experience is improved by a quick and easy click and collect process
- > **Cost-efficient** – remote technical monitoring and low maintenance costs
- > **Saves space** – stores up to 55 parcels per m<sup>2</sup>

## How does it work?

1. The operator logs in and inserts the parcels
2. The end-user is notified and receives the pickup code
3. The end-user scans or inserts the pickup code
4. The locker door opens automatically and the end-user collects the parcel

### Console

\*Tactile-audio interface that is intended to assist users with impaired vision, reading difficulties or impaired fine motor skills

Control console (CC) module doors are left-handed, all other modules are available in right- or left-handed versions.

Module	Includes
